Empirical Bioscience PCR Purification Kit is designed for high-yield recovery of DNA from PCR reactions with simultaneous removal of primer-dimers, primers, nucleotides, proteins, salt, loading dyes and other impurities.

The preparations are based on silica-membrane technology for binding DNA in high-salt and elution in low-salt buffer. The kit provides a simple and efficient way to purify linear or circular DNA in a size range between 100 bp and 10 kb. Optimized for working with DNA amounts of up to 20 μ g, the extraction kit requires no organic extraction or precipitation and guarantees high and stable recovery rates.
