PCR | qPCR | RT | Kits | Oligonucleotides

EB Pure PCR Purification Kit is a convenient system for the fast and reliable purification of PCR products. The key to this system is the High-Bind matrix that specifically, but reversibly, binds DNA or RNA under optimized conditions allowing proteins and other contaminants to be removed. Then nucleic acids are easily eluted with deionized water or a low salt buffer. This kit is used to recover DNA bands from 100 bp to 10 kb free of oligonucleotides, nucleotides, and polymerase with yields exceeding 80%. Purified DNA can be directly used for most downstream applications including T-A ligations, PCR sequencing, restriction enzyme digestion, or various labeling reactions.
